Dolan® Outdoor Area on MoOD 2009

Dolan GmbH is to present speciality fibres for outdoor applications in Brussels

With the slogan "Keep a cool head, outdoor is hot at MoOD 2009" Dolan® presents amazing designs made from solution dyed acrylic fibre. They are shown in an outdoor area of approximately 140m² at this year's MoOD from 8th to 11th September in Brussels.

The German Dolan GmbH, a 100% subsidiary of Lenzing Plastics GmbH, will present their range of speciality fibres for outdoor applications together at this year's MoOD with Royal Botania.

Dolan GmbH has been manufacturing Dolan®, an acrylic speciality fibre, since the 1960s.

Ongoing research and development have made Dolan® a leading fibre for the production of high quality fabrics for awnings, (garden) furniture, sun umbrellas and marine applications.

Dolan® offers unique properties. It has excellent light and colour fastness and produces very durable fabrics which can withstand the harshest weather conditions. Dolan® also offers a very high colour consistency which is ensured through a special production process in which the colour levels are closely monitored. Furthermore, customised colours can be matched in an in-house colour lab according to customer requirements.

The fact that Dolan is part of the Lenzing organisation offers new possibilities and synergies for Dolan® costumers, who will have access to a special brand product range. A complete programme offers special fibres for the gastronomy and the private use as well as for textile architecture made out of Lenzing Profilen® – one source for all your fibre needs.

Lenzing's Business Unit Filaments is part of the Plastics division of the Lenzing Group and produces and processes a range of filaments and fibres. In addition to innovative products in the field of dental care, monofilaments as well as bristles and abrasives, a further part of the product range is applications based on acrylic fibres, such as Dolan® and specialised polyacrylnitite fibres used as feedstock in the production of carbon fibre.
